Webmachine 0.7.71

Comments and Review Notes

1. Becoming a large project, which reflects the scope and scale of infrastructure to operate a commercial digital platform
2. Need to remove the test data generation component – pdh responsible for establishing the dbserver test generator and providing instructions for refactoring
3. On the home page ... noted
 - a. Agent page is not yet integrated (evgheni to resolve)
 - b. Attempted to signup – using github – got 404 page
 - c. Attempted to signin using email and password – did a password reset – worked great!
 - d. Selected market while logged out – page jumps to market than redirects to autho – need to make that a smoother ‘react’ transition
4. I noted some inconsistent page rendering ... as follows
 - a. But what is weird is that I did the following sequence
 - i. Logged in successfully
 - ii. Market page styling was messed up – appeared css was not being applied
 - iii. Logged out
 - iv. Logged back in ... and autho asked me to sign-in (correctly) using my last email id
 - v. Log in was a success
 - vi. Market page repo styling now looked great! As expected!
 - vii. Clicked on a repo to view the workitems – none appeared
 - viii. Backed out -- Tried again – they then appeared
 - ix. MAY WANT TO NAVIGATE AROUND SITE AND SEE IF YOU CAN RECREATE ANY OF THESE ISSUES I SAW
5. On marketplace page (/market) we do need a back button to return to home page –
6. /client – good stuff here – registered for a network – on org tab when I completed the form and saved – there was no visual cue that it was in fact saved
7. /client – database – entered first time with password and username embedded in uri – not clear if the entry failed the test – retried after removing – got a ‘topology was destroyed’ message in the console
8. When I attempted to go to billing info – got an ‘error in rendering this app’ message
9. Clicked on ‘find networks’ button – nothing rendered – do you have test networks (public) that I should have seen?
10. On the /dashboard page – do need a back button to return to home page
11. /client – tried the ‘delete client’ button --- nothing appeared to happen
